DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Carlson, et al. (6,283,859).

Carlson discloses a vehicle steering device comprising a steering column 50; a steering wheel 18 with a steering wheel rim; wherein the steering column includes a vibration device is arranged for generating a haptic signal 10 which is able to be felt by a driver on a surface of the steering wheel.

The vibration device comprises an electromagnet with a coil 58 and an armature arranged therein so as to be axially displaceable.

The coil is held on a coil body and the armature extends through an axial opening of the coil body.

At least one spring is provided which offers a force against a movement of the armature relative to the coil.

On the armature at least one stop is provided which delimits an axial movement of the armature relative to the coil.

The electromagnet can move the armature relative to the coil in opposite axial directions.

An additional mass is arranged on the armature.

The coil body fastened in the steering column by pressing is provided.

Carlson teaches a latching element 55.

The system comprises an electronic unit and at least one sensor.
